Discovering STEM **Program**

For Immediate Release

Discovering STEM program

Where: [Enter your school name here]

When Date & Time: [Enter date and time of your event]

Students will have different science, math and engineering activities in which they can participate in a "science fair" type format. This program is designed to increase the understanding of STEM concepts and materials for students in grades K-8 (with select kits for grades 9-12). The program emphasizes learning, participation, interaction, team building and having fun!

Staff members, parents and other volunteers, working in collaboration with the staff at the Regional Math & Science Center at GVSU have worked to produce this high quality learning experience for both parent and students.

Media personnel are welcome to attend events (pictures allowed with parental permission).
