Connect to GVSU on iTunes U

What you will need:

1. a Blackboard Course or Organization (the site will need to be made available)
2. iTunes installed on the computer – free from http://www.apple.com

Create the iTunes U Course

The BB Course must be made available before you can create the iTunes U Course site. Steps to do this are on Page 5 of the BB Quick Start Guide (www.gvsu.edu/it → click Blackboard).

The Edit mode should be set to On. To transform the content area to the faculty view and allow the instructor to add to the content area as well as work with other areas on the screen.

The Control Panel below Course Management may need to be expanded by clicking the double-down arrow on the left side of the link.
You can then expand the Course Tools section just below.

The link to iTunes U is at the bottom of the menu. This is the only time you will use this menu for iTunes U.

Click the link.

The next screen advises that iTunes U is not enabled and to click Submit.

There will be a confirmation screen to advise the course is created and mapped! Click OK to return to your Blackboard Course!
Assessing iTunes U Course

To access the iTunes U Course, click Tools from the Course Site Menu.

You can add a link to your Course Site Navigation
From the Tools Menu, click on iTunes U.
The next screen will confirm you are on your way to iTunes U. The iTunes application may take some time to launch (up to 2 or 3 minutes) and you may get some dialog boxes advising you are allowing the application to launch.

Once iTunes launches, you will see the iTunes U screen and you will have access to the iTunes course site.
Course sites with 0 tracks will only be available to you if you have administrative access.

Please see iTunes U documentation to further prepare your course site.
