How to insert SCORM content into a Blackboard Course

1. Locate the place in your course that you would like to put the SCORM content. Once in the correct location in your course go to build content and then click on “Content Package (SCORM)”

2. On the next screen click on browse my computer and then select the .zip file that contains your SCORM package. Once you have attached the .zip file click submit.
3. Once you have uploaded the .zip file you will need to give your SCORM package a title, you may also add a description if needed.

5. The final step is to determine how you would like your content graded, in most scenarios you will want to make sure it is set to grade for completion. To do this set the content to grade and make the points possible 0, also change the grade type to “SCORM Completion”. Lastly, you’ll want to change the grade timing to show the grade to the student after the complete the SCORM content. Once you’ve change these settings click submit and your SCORM content will be available to your students!
