

MASTER'S IN BIOSTATISTICS

Wondering about what to do after your bachelor's?

Interested in statistical jobs? Our program is designed to prepare students with a quantitative background for applied statistical positions in industry.

- Statistics minors and other quantitative majors **excel** in the program, as do statistics majors. Biology pre-requisite courses aren't necessary.
- A Master's in Biostatistics prepares you for careers in non-health related and health related companies.
- An internship is built into the program giving our graduates an advantage over other programs. **Internships within the program are plentiful.** Some students in the program do more than one.
- Typically, **100%** job placement by end of July for April graduates.
- **Strong** job outlook locally, nationally and internationally.
- You can do up to **12 graduate credits** (to be counted towards the Master's) as an undergraduate without yet being officially in the program.
