Course Description and Goals: This course examines human behavior in groups. Researchers in many different social sciences have come to understand group behavior and have developed many useful theoretical perspectives that can be applied to groups. This course reviews that work, with particular emphasis on these goals:

- Knowledge of how to do research that will lead to improvement of groups  
- Knowledge of ways group dynamics can be applied to improve groups  
- Understanding processes that occur in groups (social influence, conformity, etc.)  
- Understanding how groups can be used to help people (therapeutic groups)  
- Knowledge of major research studies of group processes  
- Firm grasp of theories that explain group processes

Beyond the content of the course, I hope that you use this course to develop further your scholarly skills, including gains in critical thinking, ethical thought, writing and communication, information search and retrieval, technological skills, scientific skills, and study skills. You will also develop enhanced insight into your own group behavior, and these insights may help you better understand yourself and your relations with others. This is NOT, however, a course on “group skills” or “encountering others in groups.” This is NOT a self-development course: our focus is on studying groups and group processes, rather than developing interpersonal skills.
Activities and Assignments: This class requires active participation. This course is theory/research focused rather than skills-focused, but I do hope that you will acquire insight into your own social tendencies as a result of participating in this class, and I expect that the knowledge you gain about yourself should be both positive and useful. As the instructor, I will try to help you learn the course material by giving lectures, assigning activities that ask you to experience group processes first hand, by answering your questions, and providing you with feedback about your progress in the course. Please remember that my primary goal is to assist you as you learn about groups and their dynamics. As a student, you are responsible, at minimum, for studying the text, retaining material presented in the lecture, taking the required examinations, and participating actively by completing the activities and assignments. Your task of learning group dynamics will be easier if you take an ACTIVE, rather than passive approach to the course. In some content-focused courses absorbing the material and repeating it back on exams is all that is required for a good grade. Such is not the case with this class, for I am more interested in your ability to conceptualize theoretical issues, apply material in new contexts, and energetically examine groups and their dynamics.

Your grade in the course will be determined by performance on an assortment of written assignments, classroom activities, and exams.

- Exams: We will have two regular exams and one comprehensive final. Naturally, items on the tests will cover all course material no matter what its source (e.g., lecture, text, readings, or video). Regular exams will be comprised of multiple choice items and brief essay questions. The final exam will be comprised of multiple choice items only.

- Thoughtful Response Papers: Several times during the semester I will ask that students write a response to a prompt related to the day’s discussion/lecture. These prompts might ask that you apply course material to a film clip, a group activity, or to one of our assigned readings. As long as your response is thoughtful and demonstrates that you have kept up with your reading, you will be given full credit for it. If you are absent on the day that a Thoughtful Response Paper is assigned you WILL NOT be given the opportunity to make it up. It is for this reason, amongst others, that regular class attendance is an important determinant of your final grade in this class. It is important to note, however, that you will write 6 thoughtful response papers and I will count your 5 highest scores.

Grading:

Your final grade will be based upon two exams (100 points each), a comprehensive final exam (100 points) and the Thoughtful Response Papers (50 points). There will be NO extra credit in the class.
