The activities are non-competitive.

Participation by all is encouraged.

The emphasis is on cooperation, teamwork, active participation and FUN!

Adequate supervision will help insure that your event runs smoothly.

You may want to arrange for building guides and/or maps to assist people in locating rooms where activities are being held.

An informational meeting for volunteers is recommended.

You may want to consider inviting high school science or math students to serve as volunteers. High school chemistry, physics or calculus students could set up a demonstration room as an added attraction during your event.

You may want to invite the local press, school photographers and the like to help commemorate your special day. Remember to get written photo release from students and parents first.

Your parent-teacher organization may want to promote refreshments and serve as volunteers.

We suggest using name tags for all participants.
