

KEY: Sedimentary

Rock Name & Number	Identifying Features		Sub - Classification
	Color	Grain size	
Sandstone (6)	tan , white or reddish	small individual grains	Clastic Sedimentary: sediment grains pressed or rock fragments cemented back together
Shale (5)	dark gray to black	very small grains, can't see them	Clastic Sedimentary: sediment grains pressed or rock fragments cemented back together
Conglomerate (3)	various individual grain colors	large and small rounded grains	Clastic Sedimentary: sediment grains pressed or rock fragments cemented back together
Limestone (4)	usually white, light grey or tan	very small, usually can't see grains	Chemical Sedimentary: dissolved minerals precipitate out of water
