Subject: ITEX Warming Reflectance Synthesis

Hello all,

I hope this email finds you well and that your summer/field seasons are going well. The weather on the North Slope has been beautiful until last week when the autumn rains began.

I am very excited about this project. I have gotten data commitments from you all that span a number of years and 25+ sites.

I have been talking to some of you about gathering the data in order to begin the processing and analyzing process. I wanted to send an email out to begin a conversation with each of you of how to access your data. I have several ideas on how I want to analyze the data since there is considerable variability with the frequency of sampling. I look forward to discussing ideas at the meeting in Parma.

I know that this is a very busy time of year for everyone with the end of the field season, academic years starting, and the ITEX meeting in September. I am hoping to get started on this October 1, after the summer and meeting travels are over. If you could please send me your data or let me know how to access it before then, I would appreciate it.

Thanks
Jeremy L. May
