**Subject:** a simple ITEX (et al.) protocol for 2021

Dear ITEX-ers!

For those who are going in the field this summer (and even some of you who aren't!) we have a very simple protocol (basically, just collecting leaves of *Oxyria digyna*) that we'd be thrilled to have as many people as possible contribute to. All the details are in the attached document. And of course please get in touch with any questions.

Since *Oxyria* grows not just in the Arctic but in many alpine areas in the northern hemisphere, some of you might even be able to contribute populations from near your house!

Here's hoping for a fun and productive summer for all of you, whether you can go in the field or not.

Best wishes,

Anne
