

Chapter 1.5 Solving Inequalities

Solve each inequality. Describe the solution set using set builder notation. Then graph the solution set on a number line.

$$\textcircled{47} \quad \frac{-7w}{-7} > \frac{28}{-7}$$

$$w < -4$$

$$\{w \mid w < -4\}$$

$$\frac{3x}{3} \geq \frac{15}{3}$$

$$x \geq 5$$

$$\{x \mid x \geq 5\}$$

Students need to know:

Solve Inequalities the same way as equations, except: when multiplying or dividing both sides by a negative, flip the sign.
