## 7 Things about Phonesoap

### 1 - What is it?

It is the first ever phone charger that also sanitizes your phone. It is completely safe for your phone because it does not use heat, chemicals, or liquids.

### 2 - How does it work?

You set your phone inside of the Phonesoap and plug in the charger. Once you close the lid the UV lights turn on and starts to break down the bacteria on your phone. In about 5 minutes your phone will be sanitized and slightly more charged.

### 3 - Who's doing it?

Phonesoap was first started when it was presented on the show Shark Tank. Since it has been featured a few years ago over 100,000 have been sold.

#### 4 - Why is it significant?

Phonosoap brings a method of sanitizing that is usually found in medical labs and incorporates it into everyday life. This is a revolutionary way to safely clean your phone.

#### 5 - What are the downsides?

The downside of Phonosoap would be that it is not "one size fits all". Some plus sized phone do not fit in the regular phone soap. Also, if your Phonosoap breaks its very difficult to troubleshoot it on your own.

#### 6 - Where is it going?

They are going to begin to incorporate wireless charging into their devices so both Android and Apple devices could charge in the same PhoneSoap.

#### 7 - What are the implications for higher education?

Students tend to bring their phones with them everywhere. University could place Phonosoap outside of labs and around campus to promote health and cleanliness in a innovative way.
