Band Saw Safety Guidelines

- 1. The upper guide and guard should be set as close to the work as possible, at least within 1/4 inch.
- 2. If the band breaks, immediately shut off the power and stand clear until the machine has stopped.
- 3. Examine blade before installing to see if it is cracked, do not install a cracked blade.
- 4. Use the proper pitch blade for the thickness of the material to be cut. There should be at least 2 teeth in the material when cutting aluminum, and three teeth when cutting steel.
- 5. Check the speed table for the material that you are cutting. Do not run the band saw too fast or the blade will wear out quickly.
- 6. If the saw stalls in a cut, turn the power off and reverse the blade by hand to free it.
