

**PSY 668: Health Profession Disability Psychology**  
**Spring 2018**  
**M, W 12:00-3:20**  
**CHS 233**

**Instructor:** Mary Bower Russa, Ph.D.  
**Office:** 2214 ASH (Allendale)  
**Email:** bowerm@gvsu.edu  
**Spring phone number:** 331-2907  
**Office hours:** right after class or by appointment

**Description:** This course presents psychological theory and research focusing on psychosocial issues that are relevant to coping with physical disabilities and illness. In addition, the course emphasizes the ways in which psychological knowledge and skill can inform clinical practice, increase the efficacy of a standard therapeutic regimen, and facilitate patient motivation, adherence, adaptation and coping. This course is subject to the GVSU policies listed at <http://www.gvsu.edu/coursepolicies/>.

**Objectives:** At the end of the course students will be able to:

- 1) Identify a range of psychosocial factors that are relevant to adjustment to illness or disability
- 2) Recognize similarities and differences in the psychosocial impact of various types of illnesses and disabilities based on characteristics such as their onset, level of incapacitation, course, and outcomes.
- 3) Name and describe symptoms of specific psychological disorders that may be encountered in working with physically disabled populations in order to improve clinical approach and referrals.
- 4) Describe and demonstrate some specific clinical techniques drawn from psychology that could be incorporated into professional practice to increase clinical success as a health care professional.
- 5) Describe some of the interventions likely to be used by psychologists and psychiatrists when working with disabled populations in order to improve referrals and professional collaboration.

**Required Text:** Rollnick, S. & Miller, W. & Butler, C. C. (2008). *Motivational Interviewing in Health Care: Helping Patients Change Behavior*. Guilford Press: New York.

This reading is organized so that the assigned reading corresponds with the exercises or skills for the day. This book will be a key resource for class, but you are likely to find that you can skim the book and focus most heavily on the examples provided, since much of the content will be

covered in detail in class. Hopefully this will be a handy reference for use in your clinical work later.

**Reserve Readings:** Additional required readings are available on E-reserve and are listed on the syllabus below. Readings have been carefully selected to supplement lecture. The reading load appears heavy due to the compressed (6 week) semester. I expect that both lecture and readings will contribute to your growing knowledge base, and some of the readings will significantly overlap with lecture while others will expand on topics covered in class. Empirical papers can, of course, be skimmed with attention to background research, methods, and findings. The course begins with a series of quick readings that focus on clinical skills to give background for skills practices early in the semester. Because of this, the reading is somewhat heavier in the first section of the course. It will be lighter in the second portion of the course---particularly at the end, to allow time for you to work on the learning summary and the case study. While you are expected to do the reading and questions on reading will appear on exams, examinations will focus most heavily on lecture material.

**Grades:** Your grade in the course will consist of two in-class exams (65 points each, the second exam is not cumulative). The first exam will include an essay, but the second will not. For the final, you will also complete a take home case study analysis in groups of four (25 points). There are three other class assignments in order to engage you more deeply with class material: you will complete a Stress and Cognitive Restructuring assignment (30 points), and a Rich Learning Project (30 points), and (at the end of course) a Learning Summary that summarizes the key ideas/skills/learning that you wish to take from the class (25 points). None of these assignments should be excessively time consuming and they will make the class material more meaningful and memorable. In addition, there will be approximately 35-45 points assigned based on brief exercises or assignments that will be completed in class or between classes. Activities completed in class for points cannot be made up at another time.

**Blackboard:** I will post Powerpoints for the lectures on BB at least 12 hours prior to each class. Please download and print the Powerpoints (PPT) and bring them to class in order to facilitate your notetaking. I hope that this will free you from heavy notetaking so that you can more completely process information as we move through it. Powerpoints will be organized into two key folders for each class: Theory and Research, and Skills and Interventions. On some days you will also find additional materials posted on BB in a folder called "Supplements" (reference information, forms for class activities, etc). You should also print this material and bring it to class. Because of the length of each class, and my attempts to keep the class time engaging, there is a lot of material that you will need to keep organized. I would suggest that you date materials when you print them, and then use a ring binder to collect and organize course material under the three headings (Theory and Research, Skills and Interventions, and Supplements) as we move through the spring session. Based on feedback from previous classes, I will sometimes not cover every bit of information on the PPT in detail, but I will hit on key or more difficult points and will always be happy to respond to any questions. This will free up more time in class for discussion and supplemental activities such as in class exercises, speakers, and films. However, I expect that you will review the PPTs in detail and will be prepared to respond to questions about the material on exams.

**Office Hours:** My office is in Allendale; however, for your convenience, I will hold office hours in this same classroom directly after class. If no one comes to meet with me, I will leave after 10 minutes. I am also able to meet before class with an advance appointment.

**Attendance:** I expect that you will attend class every day unless exceptional circumstances arise. You must be in class on the days that examinations are given—I will not be giving make-up examinations.

**Tentative Schedule (likely to change some based on class pace)**

DATE	BACKGROUND PSYCHOLOGICAL RESEARCH/THEORY	INTERVENTION/ MENTAL HEALTH RELATED SKILLS AND ISSUES
May 6 MON	<p><b>Discussion of course goals and overview</b></p> <p><b>Contextual factors in clinical outcomes</b></p> <p><u>Readings:</u></p> <ul style="list-style-type: none"> <li>• <i>Scovern, common factors (optional)</i></li> <li>• <i>Resnicow, MI (optional)</i></li> </ul> <p>ASSIGNMENT: do questionnaire from CBT and pick issues for self for CBT assignment, do one sample worksheet for next class.</p>	<p><b>PPT Stress and Cognitive Restructuring</b></p> <p><b>CBT Stress Management assignment overview (1 sample to next class)</b></p> <p><b>PPT Open and Closed questions</b></p> <p><u>Readings:</u></p> <ul style="list-style-type: none"> <li>• <i>C.
