

# OCCUPATIONAL SAFETY & HEALTH MANAGEMENT (OSHM)

## Use Your Expertise to Protect Lives

### Bachelor of Science

- Prepares individuals for entry-level safety management positions
- Sets the stage for professional certification
- Accredited by the Applied and Natural Science Accreditation Commission of ABET
- Recognized by the Institute for Safety and Health Management

### What Do OSHM Professionals Do?

- Analyze operating procedures, materials, machines, and conditions at work sites
- Determine risks of injury, occupational disease, and damage to property or equipment
- Develop measures for controlling workplace and environmental hazards as well as limiting financial loss
- May specialize in transportation, construction, environmental problems, product design, insurance loss control, fire and property protection, or healthcare

### Career Opportunities

- In high demand in Michigan and across the U.S.
- Most employers with 200+ employees have one or more full-time safety personnel
- Many smaller employers also hire safety personnel
- Job opportunities exist in hospitals, municipalities, manufacturing, retail, wholesale, construction, transportation, consulting, insurance, and more
