

# CIVIL DISCOURSE - IDS 350

## CLIMATE CHANGE CONVERSATIONS AND COLLABORATIONS FOR OUR FUTURE

How significant is the human impact on the environment?  
Has our demand for new resources and new technology driven us closer to a solution to that problem or simply made it worse? Should GMO foods be avoided or is the organic food movement fear mongering? What defines sustainability?

Who should we be listening to? Who should be involved in these discussions?

These questions and more will be explored in IDS 350. Climate Change Conversations and Collaborations for Our Future will tackle key environmental issues from an anthropological perspective. This course will discuss human impacts on the environment, both locally and globally. Student research will focus inward on culture and local issues.

Offered Fall 2018.
