## **Policy**

1. **Proposed Modifications (Non-exempt studies).** Researcher initiated modifications to non-exempt research studies may not be initiated without prior written IRB approval except as provided for under the Emergency Modification Rule. This includes any modifications including those required by other entities, e.g., additional IRBs with oversight responsibility.
  
2. **Proposed Modifications (Exempt studies).**
  - a. With the exception of personnel additions, if a proposed modification to an exempt research protocol does not alter the level of review required (i.e., does not require upgrading to expedited or full board review), in part or in total with previously made changes, and does not increase the risk-to-benefit ratio, the researcher may implement the change without prior approval from the IRB. Reporting to the IRB is not required. This authorization applies *only* to exempt studies.
  
  - b. Proposed personnel additions to exempt studies may not be initiated without prior written IRB approval. Authorized Office of Research Compliance and Integrity (ORCI) staff members may approve personnel changes to exempt studies on behalf of the IRB without additional review by the IRB.
  
3. **Required Modifications.** The IRB may require modifications to any protocol at any time in order to minimize risks to study participants or to enable researchers to comply with changes to federal, state, or local laws, or institutional policies.

4. Emergency Modification Rule. If a researcher determines that a study modification is necessary in order to minimize emergent and immediate risks of harm to enrolled or future study participants, the modification(s) may be implemented without prior IRB approval. In compliance with *IRB Policy #1020: Reportable events: protocol deviations, unanticipated problems and adverse events*, within seven (7) calendar days following implementation of the modification the IRB chair must be notified in writing of the nature of the risks, the steps taken to minimize the risks, and any additional proposed modifications to minimize future risks. (45 CFR 46.108(a)(3)(iii)). Final acceptance of the proposed modification is subject to IRB approval under normal review procedures.

## **Procedures**

### 1. Exempt Studies

- a. If the proposed modification increases the risk-to-benefit ratio, but does not alter the IRB review level required, the researcher must submit a modification request and receive IRB approval prior to implementing the modification.
- b. If the proposed modification alters the IRB review level required, the researcher must submit a new protocol application request and obtain approval from the IRB prior to implementing the change.

### 2. Non-Exempt Studies

- a. Personnel change requests, with the exception of a request to change the principal investigator, may be reviewed and approved by the IRB Chair without additional review by the IRB.
- b. All other proposed modifications, including a request to change the principal investigator, will be reviewed under the same procedures as the initial review, as outlined in *IRB Policy 900: IRB Protocol Review*.
