

Blackboard Ultra access for students on mobile devices

With Blackboard Collaborate updating to Blackboard Ultra, students will now have the ability to access a course's Blackboard Ultra session using their mobile devices. This can be done via the **Chrome browser App** or the **Bb Student App**, which are both available on the Apple App Store, Google Play, as well as the Windows Store.

Step 1: Students will navigate to the correct course, and then course menu and click the content area that contains their Blackboard Ultra session.

Step 2: Students must click the **Join Room** button before they are redirected.

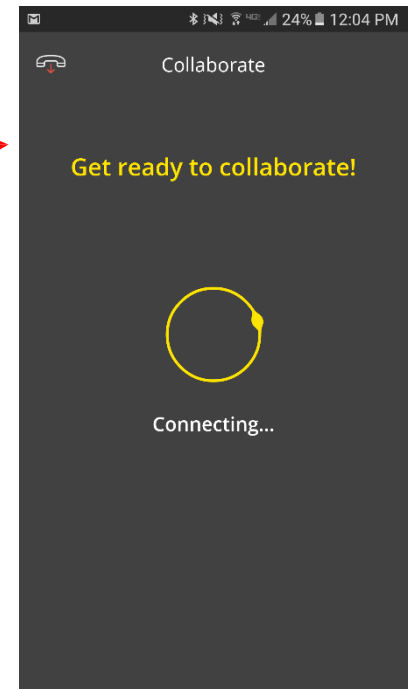

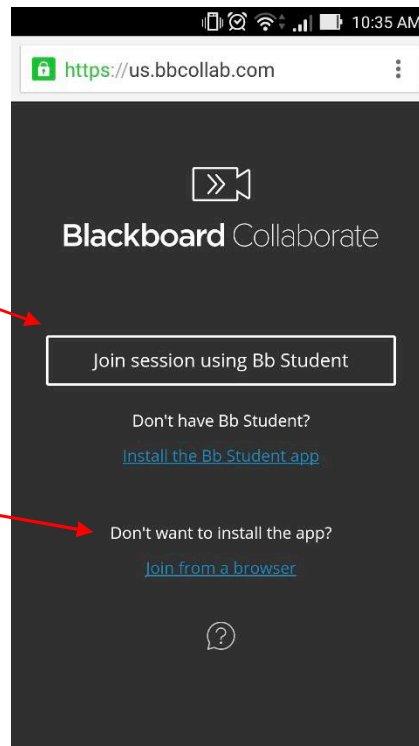

Step 3: Students using the Bb Student App will directly be redirected to the Blackboard Ultra session within the application

Step 4: Students using the Chrome browser applications will see the following page after clicking **Join Room**:

*Students can choose to be redirected to the Bb Ultra session within the Bb Students application.

*Students who do not have the application can choose to continue with the Bb Ultra session within their mobile Chrome browser.

Once students have accessed the Blackboard Ultra session they will be able to use all functionalities that the instructor has given them access to using the buttons found in the bottom row of their screen.

Students will also be able to see and adjust the size of the screen being shared with them from within the application:
