

PAS Program Student Clinical Year Retest Policy and Procedure

1. Students achieving an end-of-rotation examination score of less than 70% may qualify for a retest to evaluate the student's knowledge of the clinical rotation. A retest is not a form of remediation. The purpose of the retest is to give the student another attempt at demonstrating their knowledge of the clinical rotation. End-of-rotation retests are comprehensive and cover the rotation learning outcomes.
2. Students who do not score greater than or equal to 70% on an end-of-rotation examination are responsible for contacting the clinical module coordinator within 72 hours of the original examination grade posting to discuss retest options and schedule a time for retesting, if applicable.
3. The retesting date is scheduled at the discretion of the clinical module coordinator. The retest must be completed on the date(s) scheduled by the Instructor of Record. If a student is unable to complete the retest on the given date(s), they will be given the option to either pursue independent study or deceleration.
4. Students are only allowed FOUR retests for end-of-rotation examinations over the entire Clinical Rotation Year (PAS 610, 620, 630).
5. If a retest is passed with 70% or higher, the end-of-rotation examination score is 70%.
6. If the student scores less than 70% on the initial examination and the retest examination, the student undergoes academic review as outlined in the PAS Program Student Policy for Academic Review. The student is required to complete remediation to demonstrate competency as outlined in the PAS Program Student Clinical Year Corrective Intervention and Remediation Policy. This will result in delayed program completion.
7. If a student scores less than 70% on more than FOUR end-of-rotation examinations, the student loses the ability to retest and will be dismissed from the program, as outlined in the PAS Program Student Policy for Academic Review and the PAS Program Student Clinical Year Corrective Intervention and Remediation Policy.
8. Students achieving a written summative examination score of less than 70% qualify for a retest to evaluate the student's knowledge. A retest is not a form of remediation. The purpose of the retest is to give the student another attempt at demonstrating their knowledge. Written summative retests are comprehensive. The retesting date is scheduled at the discretion of the instructor of record for PAS 630, which may delay program completion. If a retest is passed with 70% or higher, the written summative examination score is 70%. If the retest is not passed with 70% or higher, the student undergoes academic review as outlined in the PAS Program Student Policy for Academic Review. The student is required to complete remediation to demonstrate competency as outlined in the PAS Program Student Clinical Year Corrective Intervention and Remediation Policy and Procedure.
